

How does my boiler work?

Chaps

1 Your boiler contains fuel - either natural gas, LPG (Liquefied Petroleum Gas) or oil.

1

2 The water is circulated throughout your heating system.

3

2 This fuel supplies a flame which plays onto a heat exchanger connected to a pipe carrying cold water. The water is heated to approximately 60 degrees.

4

3 Supplying your home with hot water and heated radiators.

5
